

D3O manufactures a unique patented technology used to produce a premium shock absorbing material using enhanced chemistry and product engineering.

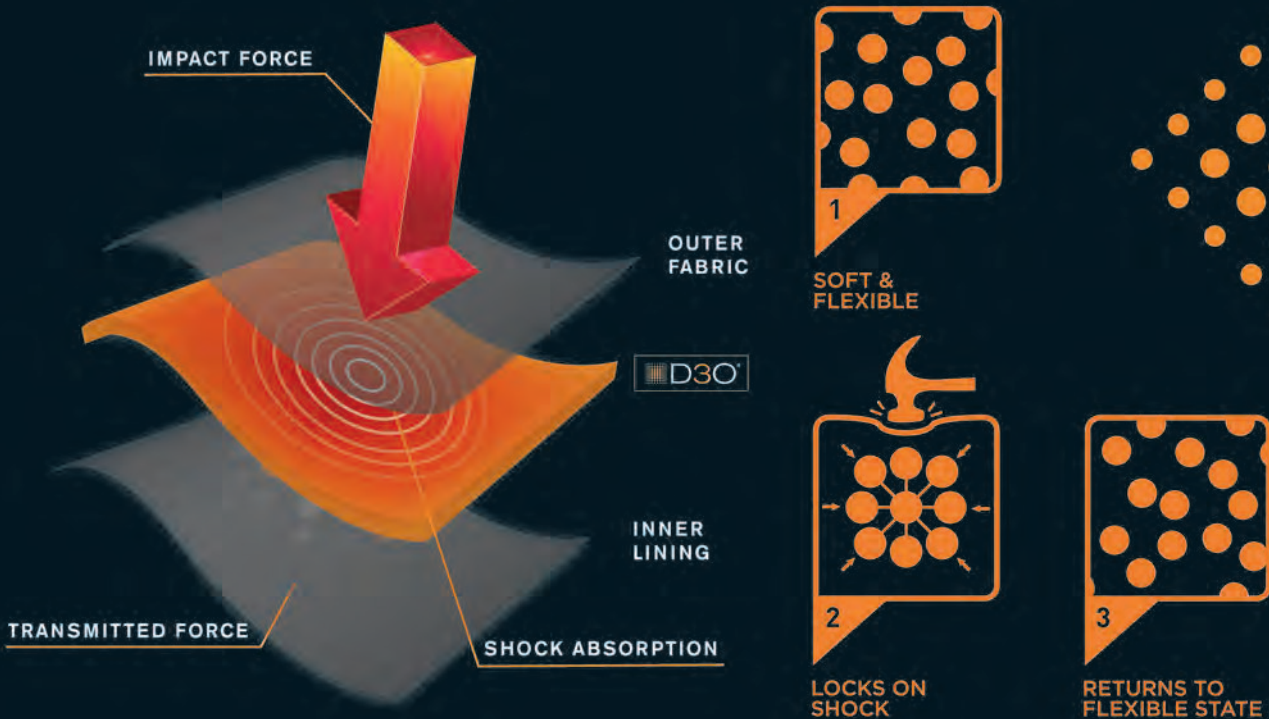

The result is a low profile, flexible, comfortable and lightweight armour without compromising on protection against impact. D3O's high performing protective material is used in a wide range of markets including motorcycle, sport, electronics, footwear and PPE.

A new partnership between D3O and Richa, has resulted in the introduction of a full D3O protector kit (Level 1) a in almost all new jackets and trousers of the 2014 Richa Collection.

Being market leader in motorcycle protection, D3O and richa were meant to be a perfect match. Our mutual dedication to find the ideal safety-comfort balance, evolved in the most promising Richa Collection ever.

All new jackets and pants which carry the D3O icon on their product page, are fully equipped with a D3O protector kit: a central back protector, shoulder and elbow sets for the jackets, and D3O knee protectors for the trousers.

To upgrade your current jacket or trousers, the D3O protectors are also separately available (Page 81).

## HOW DOES IT WORK?

D3O materials in their raw state flow freely when moved slowly, but on shock lock together to absorb and disperse the energy. This reduces the force transmitted, before instantly returning to their flexible state.
