

NON-TUBULAR HANDLEBARS HOLDER

UNIVERSAL BELT FOR SM interphone **SSC** FOR NON-TUBULAR HANDLEBARS

Description

Mounting system for use on non-tubular handlebars.

Thanks to a precise tightening system with a foolproof guide and ultra-fine regulation of the belt locking device, this holder offers the highest degree of stability on the non-tubular handlebars found on scooters and motorcycles.

The rubber strap provided with the system is applied along the inside of a belt equipped with ultra-fine adjustment capability and protects the handlebar from pulling and rubbing. The strap is cut to fit the circumference of the handlebar before application.

The sturdy eyelet on the end of the belt with ultra-fine adjustment allows the user to pull on the belt gradually until the mounting system reaches its most stable, final position.

The system for adjusting the support bracket permits precise regulation of the angle at which the snap-on bayonet clip is pointed and is designed for use with dedicated products in the Interphone line. The SSC system is easily removable for use on other vehicles and is also equipped with a quick-release lever for rapid removal of the device.

Sturdy and well-designed, SSC does not require installation by qualified personnel.
